### Corpex Email Security Anti-Spam

Corpex's Email Security service offers Anti-Virus and Anti-Spam protection by scanning your emails, inbound and outbound, at the Internet level before they reach you or your recipient's network.

The Anti-Spam service works by filtering your company's email through our highly sophisticated, dedicated spam recognition engine, which will detect almost all spam.

Our Anti-Spam engine uses robust and proven technology, providing maximum protection with no perceptible impact on email delivery speed.

#### How does it work?

Corpex's Email Security Anti-Spam highly sophisticated spam recognition engine analyses each email for spam characteristics. It then places any spam in the relevant user's personal, web-based spam box, for you to view at any time should you wish.

The filtering can be tailored to your specific requirements at company and individual user level using your own white and black lists. Use our proprietary technology to combat Spammers as they change their methodology to try and avoid detection. It tracks the changes, learns from them and its "Rules" are continually adapting to safeguard your company's email security.

Each user has the option of choosing to recover any email placed in their spam box, or indeed adding the email address of the sender to the user's own 'white list' or 'black list'. This way, within a short space of time, each user will have complete control over the emails that they wish to receive.

#### Key features

Simple to set up and no hardware or software required

No time delay, it takes far less than a second per email

Identifies and stops spam in both your incoming and outgoing emails

Searches for tell-tale signs of spam via sophisticated heuristics based analysis
